Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 21-22 rejected under 35 U.S.C. 102(b) as being anticipated by Tozama et al 6,098,32. Tozama shows a method for controlling movement of a load carrier that is pivotally attached to a boom which is pivotally mounted on a chassis, wherein a linear load carrier hydraulic actuator produces movement of the load carrier with respect to the boom and a linear lift hydraulic actuator produces movement of the boom with respect to the chassis, the method having receiving a boom velocity command (figure 3) designating a desired linear velocity for the lift hydraulic actuator; sensing a position of the lift hydraulic actuator; sensing a position of the load carrier hydraulic actuator; deriving a setpoint position 100 for the load carrier in response to the position of the lift hydraulic actuator and the position of the load carrier hydraulic actuator; producing an error value in response to deviation of an actual load carrier position from the setpoint position; producing a load carrier velocity command based on the boom velocity command and the position of the lift hydraulic actuator; and employing the load carrier velocity command and the error value to generate an

adjusted load carrier velocity command, and operating the load carrier hydraulic actuator in response to the adjusted load carrier velocity command.

As concerns claim 22, Tozawa having determining a velocity of the load carrier; generating a velocity error in response to deviation of the velocity of the load carrier from a desired velocity; and wherein producing the error value also is in response to the velocity error.

Allowable Subject Matter

3. Claims 2-20, and 23-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
